OM GIRATKAR

Pune, Maharashtra, India | omrgiratkar@gmail.com | +91 7720845031 | github.com/omrgiratkar | linkedin.com/in/om-giratkar

PROFESSIONAL SUMMARY

Computer Engineering graduate with a strong foundation in full-stack web development across Java/Spring Boot and MERN (MongoDB, Express.js, React.js, Node.js) technologies. Experienced in designing and implementing RESTful APIs, responsive front-end interfaces, and secure backend services, backed by both relational and NoSQL databases (MySQL, MongoDB). AWS Cloud Practitioner certified, with hands-on exposure to authentication, unit testing, and Git-based collaborative workflows. Eager to contribute as a Java Full Stack Developer building reliable, scalable, end-to-end web applications.

EDUCATION

Savitribai Phule Pune University Dec 2021 - Jun 2025
B.E., *Computer Engineering* GPA: 7.21

CDAC Hyderabad Feb 2026 - Aug 2026
PGCP-AC, *Diploma in Advance Computing*

SKILLS

TECHNICAL SKILLS: Languages: Java, JavaScript (ES6+), C, Frontend: React.js, HTML5, CSS3, Tailwind CSS, Framer Motion, Responsive/Mobile-First Design, Backend & APIs: Spring Boot, Hibernate, Node.js, Express.js, RESTful API Design, JWT Authentication, Databases: MySQL, MongoDB, PostgreSQL, SQL, Cloud & Tools: AWS Cloud Practitioner (Certified), Git/GitHub, VS Code, IntelliJ IDEA, Postman, Engineering Practices: SDLC, Agile/Scrum, OOP Design Principles, Unit Testing & Debugging, Code Reviews

WORK EXPERIENCE

Cognifyz Technologies | Full Stack Development Intern Aug 2026 - Sep 2026

- Completed a comprehensive full-stack development internship spanning beginner-to-expert level tasks, building a Node.js/Express application with EJS server-side rendering, RESTful CRUD APIs, MongoDB integration, and JWT-based user authentication with authorization checks on protected endpoints.
- Implemented client- and server-side form validation, dynamic DOM manipulation, and client-side routing, and extended the application with custom middleware, external API integration (OAuth), and server-side caching to improve performance and reliability.

The Kiran Academy | Software Trainee Oct 2024 - Mar 2025

- Built backend services and REST APIs for a full-stack Event Management System (Java stack), enabling real-time data synchronization between client and server.
- Implemented authentication and role-based access control (Admin, Organizer, User) following secure coding practices for registration and management workflows.
- Participated in peer code reviews and iterative feature refinement, and built interactive dashboards (Recharts) to visualize service usage and engagement metrics.

PROJECTS

ExpenseIQ — Personal Finance Management Platform

- Designed and built a full-stack finance management service using Java, Spring Boot 3, Spring Security, and JWT, exposing REST APIs consumed by a React/Vite frontend, backed by MySQL.
- Integrated Cloudinary for cloud-based image storage, Apache POI/iText for data export, and a scheduled background job for automated email reminders, focusing on service reliability and maintainability.
- Applied secure-by-design practices (authentication, authorization, input validation) and structured the codebase for testability and clean separation of concerns.

Personal Portfolio Website — MERN Stack

- Built a fully responsive personal portfolio website using React.js, Node.js, and Express.js, featuring dynamic pages, real-time form validation, and smooth page transitions powered by Framer Motion.
- Designed a mobile-first, responsive UI with Tailwind CSS, ensuring consistent performance and accessibility across devices.

CERTIFICATIONS & ACHIEVEMENTS

- AWS Cloud Practitioner Essentials - Amazon Web Services
- Java - LinkedIn Learning
- Frontend Technology - Udemy
